

DION AUGUSTA-SP

The all new Dion Augusta-SP is typically a premium, high-performance vehicle designed for both style and functionality. These scooters often boast advanced features such as powerful engines that provide swift acceleration and higher top speeds, making them suitable for both city commuting and longer rides.

Dion Augusta-sp

The Performer Unleashed

You move around the world's cities and metropolitan regions exactly at the point where each neighborhood represents the first step towards the next new idea. And you are also always on the move. We are familiar with this captivating dynamism as we have been applying it for over the years to develop solutions and concepts for urban electromobility, something that means far more now than just getting from one place to the other. It is from this long-term innovative leadership that the Dion Augusta SP is launched into a new era of design, to seamlessly integrate into your everyday life thanks to its intelligent connectivity solutions.

Augusta-SP: The design of the vehicle centers around the slim energy storage unit in the underfloor assembly and the compact drivetrain. The design liberties and solutions here have led to new aesthetics, for instance the charging compartment that folds out towards the side or the floating seat. The low-center of gravity represents a further benefit: fun handling, surprising dynamism and timeless riding pleasure. As a result, one innovation seamlessly leads to another, in terms of design. Ample, calm and minimalistic surfaces dominate the overall design. In this context, the front end is excitingly broken up while the rear end reveals technological components, a typical feature of motorcycles. . It's like the stealthy model of the electric scooter world!

Lightweight frame, balanced rigidity, and responsive suspension components make this bike handle like a dream. Plus, front and rear disc brakes ensure confident stops. And guess what? Maintenance is a breeze—no oil changes required!.

Key Features

- 7.5 KW Peak PMSM Hub Motor
- 150A sinewave pre-programmed Controller with auto cut-off and reset function
- 4.3 KW LiFePO4 Traction Battery
- Top Speed - 100 kmph
- Actual Range - upto 110 kms
- Front telescopic, And Rear mono spring load hydraulic suspension
- Synchronized Front And Rear disk brake system
- Anti-Theft Lock
- Front Dual-Projector Led and Rear LED
- 1Kva charger (4-5 hrs)
